DETAILED ACTION

Response to Amendment

1. Examiner acknowledges Applicant's response filed 17 July 2008 containing amendments to the claims and remarks.
2. Claims 21-29, 32, and 34-41 are pending.
3. Examiner acknowledges that Applicant's amendment to claim 38 is sufficient to overcome the previous objection.
4. Claims 21-29, 32, and 34-41 are allowed. Examiner's statement of reasons for allowance follows.

Allowable Subject Matter

5. Claims 21-29, 32, and 34-41 are allowed.
6. The following is Examiner's statement of reasons for allowance:
7. With respect to claims 21-29, 40, and 41, Examiner has determined Bolz (US 4,980,029) to be the closest relevant prior art. Bolz discloses an apparatus (see Bolz, Fig. 2) for converting organic matter into carbon solids and a mixture of hydrocarbons, comprising: (a) a heater (51) configured to receive and heat the organic liquor to produce a mixture of liquid and vaporized oil, the heater (51) having an outlet; (b) a reactor (52) comprising a vessel having an inlet and first and second outlets wherein the inlet communicates with the heater outlet, the reactor (52) configured to receive and

Art Unit: 1797

convert the mixture of liquid and vaporized oil into carbon solids and a mixture of hydrocarbon vapors and gases; (c) a first cooler (53) having an inlet and an outlet, the inlet communicating with the first reactor outlet for accepting the carbon solids, the first cooler being configured for containing and cooling the carbon solids accepted from the reactor (52); and (d) a second cooler (25) having an inlet and an outlet, the inlet communicating with the second reactor outlet for accepting the mixture of hydrocarbon vapors and gases (see Bolz, Fig. 2 and accompanying text).

However, Bolz does not disclose or suggest wherein the apparatus further comprises “a particulate separator disposed between the second reactor outlet and the second cooler inlet, wherein the particulate separator returns entrained particulate from the mixture of hydrocarbon gases and vapors to the reactor” as required by Applicant’s amended claims.

Therefore, Examiner finds Applicant’s claims 21-29, 40, and 41 patentable over the apparatus of Bolz.

8. With respect to claims 32 and 34-39, Examiner has determined Bolz (US 4,980,029) to be the closest relevant prior art. Bolz discloses an apparatus comprising: (a) a heated vessel (51) having an inlet and an outlet; (b) a first, heated auger (52) having an inlet and an outlet, the inlet and outlet being configured and dimensioned to permit higher pressure to be applied in the first auger (52), the first auger inlet communicating with the vessel outlet (see Bolz, Fig. 2; and column 3, lines 45-48); (c) a second, cooled auger (53) having an inlet in communication with the first, heated auger outlet, the second auger (53) providing for cooling of solids received from the first,

Art Unit: 1797

heated auger (see Bolz, Fig. 2; and column 12, lines 52-67); (d) a condenser (25) in communication with the first, heated auger outlet to receive vapors and gases therefrom; and (e) a water source communicating with the second, cooled auger (53) providing cooling water (see Bolz, Fig. 2; column 12, lines 52-67; and entire disclosure).

However, Bolz does not disclose or suggest wherein the apparatus further comprises “a first fluid-solid separator communicating with the first auger outlet, [the] first separator having a first outlet for vapors and gases and a second outlet for solids, wherein [the] first outlet communicates with the condenser and [the] second outlet communicates with the second, cooled auger” as required by Applicant’s amended claims.

Therefore, Examiner finds Applicant’s claims 32 and 34-39 patentable over the apparatus of Bolz.

9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
